목차

- PhysX
- Physics Asset
- Ragdoll
- Vehicle
- Depth of Field
- Cloth

PhysX

물리 시뮬레이션을 담당하는 SDK

전체 흐름

Physics Asset

Physics Asset Editor

각 Bone에 연결된 Body의 collision primitive 편집

Free / Limited / Locked
옵션 선택 가능

Constraint의 Angular Limit 시각적 편집 가능

Body Auto Generate

Ragdoll

Kinematic Mode

애니메이션/코드 제어

Dynamic Mode

물리 엔진 제어

Ragdoll

Vehicle

매 프레임 흐름

Depth of Field

1. 초점면 위 (Sharp)

2. 초점면 밖 (Blur)

3. 왜 DOF가 생기나?

$\text{CoC} \leq \text{Pixel} / \text{허용 CoC}$
충분히 선명

$\text{CoC} > \text{Pixel} / \text{허용 CoC}$
흐림

Depth of Field

4. 엔진에서의 근사

DOF를 흉내 내기 위해
레이어를 분리하여 처리

----- Near / Far를 분리해 합성 -----

Cloth

Constraint Solve 개요

- **Edge Constraint**: 인접 Particle 사이 거리/늘어짐 유지
- **Pin (invMass = 0)**: 고정된 Particle을 기준으로 형태 유지
- **Collision Constraint**: PhysX Scene Shape를 NvCloth Primitive로 변환하여 충돌 보정
- **PBD Iteration**: 예측 위치를 반복 보정하여 최종 위치 계산

외력으로 예측 위치를 계산한 뒤 Constraint Solve를 반복하여 최종 위치를 결정

Particle + Constraint 기반 시뮬레이션 결과를 **엔진 렌더링 경로**에 반영
